

EVENT PROPOSAL

TITLE OF THE PROGRAM:

Open House Session on Green Computation: Smart Computing for a Sustainable Future

1. Introduction

In recent years, the rapid expansion of computing technologies has significantly increased energy consumption and environmental impact. Green Computation emphasizes the efficient use of computing resources to reduce carbon footprint and promote sustainable development.

This proposal aims to organize an Open House Session on Green Computation within the college premises, delivered by BCA students, to enhance practical knowledge, environmental awareness, and academic engagement.

2. Objectives

- To introduce the concept and importance of Green Computation
- To promote sustainable and energy-efficient computing practices
- To enhance students' presentation and practical skills
- To encourage environmental responsibility through information technology
- To provide exposure to emerging trends in computing

3. Theme and Major Areas

Theme: Green Computation – Smart Computing for a Sustainable Future

Major Areas:

- Energy-Efficient Software and Coding Practices
- Green Data Centers and Cloud Computing
- Artificial Intelligence for Sustainable Computing
- E-Waste Management and Sustainable Hardware
- Green Operating Systems and Virtualization

4. Target Participants

- BCA Students (All Semesters)
- Chairperson
- Faculty Members
- College Staff

5. Date, Time, and Venue

Date:

Time:

Venue:

6. Program Modality

- Student group-wise presentations and demonstrations
- Poster and model exhibitions
- Interactive question and answer sessions

EVENT PROPOSAL

- Faculty evaluation and feedback

7. Resources Required

- Laptops and multimedia projector
- Tables, display boards, and extension cords
- Posters, charts, and stationery materials
- Certificates for participants

8. Expected Outcomes

- Improved awareness of sustainable computing practices
- Enhanced practical and communication skills of students
- Promotion of eco-friendly academic culture within the college
- Alignment of theoretical knowledge with real-world applications

9. Conclusion

The proposed Open House on Green Computation will provide a meaningful platform for BCA students to explore emerging trends in sustainable computing. The program supports the academic objectives and contributes positively to environmental awareness through technology.
